

# FLEXI-LINER®

## Flexible Aluminum Chimney Liner Kits

### Features & Benefits

#### **RELIABILITY**

Flexi-Liner is a well established product with no surprises – except its superb quality. Flexi-Liner Aluminum Chimney Liner Kits have a field utilization history throughout North America since 1980.

#### **FLEXIBLE**

Flexi-Liner Tubes are the most flexible aluminum liners on the market. They have proven to be more resistant to tearing than other aluminum liners under the toughest conditions. These benefits have been achieved by the Flexi-Liner Tubes incorporating an offset two ply seam, uniquely located on the shoulders of corrugations rather than in the valley of corrugations like other flex products.

#### **COMPRESSIBLE**

Flexi-Liner is the most compact chimney downsizing kit on the market, utilizing a tube compression ratio of **5:1** on most sizes. Competitors typically only achieve a 3:1, requiring a very large carton. The compact Flexi-Liner kits make stocking, shipping and handling both easy and economical.

#### **STRONG**

Flexi-Liner Tubes are the strongest aluminum liners on the market. There are no seams between corrugations, which are commonly the weak point of other systems - causing them to ‘snap’ at the seam.

#### **WARRANTY**

Flexi-Liners are now backed by Selkirk’s Smart Choice Warranty - the industry’s best limited Lifetime coverage.

#### **PRODUCTS & PROGRAMS**

Flexi-Liner is available in 3” - 8” sizes in 15’, 25’ & 35’ Kits (Larger sizes available as Special Order). 10’ Extension Lengths and other accessories are also available. Mix Flexi-Liner into your Selkirk Program to maximize your returns across all product lines. Flexi-Liner can be added to your orders for B-Vent, Insulated Chimney, Direct Vent Pipe, Saf-T Vent AL29-4C and more.....

#### **INDUSTRY LEADERSHIP**

Selkirk continues to expand product lines through new product development and through acquisition of strategic niche products like Flexi-Liner.
