

2/28/2012

To whom it may concern,

Please note that the Selkirk Direct-Temp™ venting system is a listed and accepted venting system for the Savannah line of direct vent gas appliances. All current Savannah fireplaces are available for use with the Selkirk 4" & 6-5/8" venting system. As well, all future Savannah direct vent appliances will be made available for use with the Selkirk venting system.

All installations must conform to the appropriate user's manual for any specific appliance including allowable venting configurations and clearance to combustibles.

Additionally, all installations must also adhere to the installation instructions provided by Selkirk for their venting system.

For more information on the Selkirk Direct-Temp™ venting system (including a cross reference to Dura-Vent parts), please contact Selkirk Technical Support at 800-848-2149 ext. 203, thank you.

Regards,

Craig McClean
General Manager
